The present sequence is a human NB-ARC and CARD containing protein (NAC) beta isoform-CARD-X1 chimeric cDNA. NAC protein comprises a nucleotide binding (NB) domain (also referred as NB-ARC domain), a caspase-associated recruitment domain (CARD) and a TIM-Barrel-like domain. CARD-X protein comprises a caspase-associated recruitment domain (CARD) and a TIM-Barrel-like domain. The caspases, cysteine aspartyl proteases, are principal effectors of apoptosis. NAC and CARD-X are used for screening modulators that modulates apoptosis, cytokine production, cytokine receptor signalling and other cellular processes. They can act as an immunogen for the production of polyclonal and monoclonal antibodies. They can also be used to diagnose and treat inflammatory disorders such as sepsis, fibrosis and arthritis and cancer pathologies
                                                                                                                                                                                                                                                                                                                                                                                                                                    Disclosure; Page 162-168; 184pp; English
                                                   as adenocarcinomas and leukaemias.

domain. CARD-X protein comprises a caspase-associated recruitment domain (CARD) and a TIM-Barrel-like domain. The caspases, cysteine aspartyl proteases, are principal effectors of apoptosis. NAC and CARD-X are used for screening modulators that modulates apoptosis, cytokine production, cytokine receptor signalling and other cellular processes. They can act as an immunogen for the production of polyclonal and monoclonal antibodies. They can also be used to diagnose and treat inflammatory disorders such as sepsis, fibrosis and arthritis and cancer pathologies such as adenocarcinomas and leukaemias.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is a human NB-ARC and CARD containing protein gamma or delta isoform-CARD-X1 chimeric cDNA. NAC protein comprises nucleotide binding (NB) domain (also referred as NB-ARC domain), a

맑

The polynucleotide sequence given in AAA78381 to AAA78432 encode the human secreted proteins given in AAB24437 to AAB24604. Human secreted

```
proteins have activities based on the tissues and cells the genes are expressed in. Examples of activities include: cytostatic; antianaemic; antiabetic; antinflammatory; ophthalmological; antirheumatic; cardiant; anti-HIV; cantiarthritic; antipsoriatic; antiangiogenic; cardiant; anti-HIV; choosing concerns of the protective; antimicrobial and antiparkineonian. Chuman secreted protein polymuclectides, polypeptides, antagonists and/or agonists may be useful in treating, preventing, and/or diagnosing other conditions such as: (a) cancers; (b) diseases, disorders, and/or conditions such as: (a) cancers; (b) considers of the immune system; (c) angiogenesis disorders; (d) disorders of the immune system; (c) angiogenesis disorders; (f) diseases associated with increase apoptosis; (g) neurological diseases; and ch) infectious diseases. They are also used to promote wound healing. AAA78372 to AAA78380 and AAB24436 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

The sequences can be used in the treatment of cardiovascular, urinary system, reproductive system, immune, respiratory, neurological and gastrointestinal disorders, infections, and particularly cancer, especially testicular cancers. The present sequence is a cDNA of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
The invention relates to an isolated polynucleotide (I) comprising: (a) 2C any of a group of over 4000 nucleotide sequences (ABV94628-ABV99145); (C (b) complements of (a); (c) sequences consisting of at least 20 contiguous residues of (a); (d) sequences that hybridize to (a), under conditions; (e) sequences having at least 75% or 90% (c) identity to (a); or (f) degenerate variants of (a). Polypeptides (ABP68596-ABP68637) encoded by (I) and oligonucleotide can be used to complement cancer in a patient and compositions comprising polypeptides (C) olynucleotides, antibodies, fusion proteins, T cell populations and contigen presenting cells expressing the polypeptide are useful in CC polynucleotides can be used as probes or primers for nucleic acid complementation, in the design and preparation of ribozyme molecules for inhibiting expression of the tumour polypeptides and proteins in the cumour cells, in vaccines and for gene therapy.

CC Mote: The sequence data for this patent did not form part of the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   31-JAN-2001;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Email: cgapbs-r@mail.nih.gov
Tissue Procurement: Dr. Gary W. Hunninghake, U of I
CDNA Library preparation: Dr. M. Bento Soares, University of Iowa
cDNA Library Arrayed by: Dr. M. Bento Soares, University of Iowa
cDNA Sequencing by: Dr. M. Bento Soares, University of Iowa
DNA Sequencing by: Dr. M. Bento Soares, University of Iowa
Clone Distribution: Clone distribution information can be obtained
from Dr. M. Bento Soares, bento-soareswiowa.edu
The following repetitive elements were found in this cDNA
sequence: 32-117, >MER41B#LTR/MER4-group
Sequence: M13 FORWARD
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          UI-H-FT1-bib-1-22-0-UI.s1 NCI_CGAP_FT1 HCUI-H-FT1-bib-1-22-0-UI 3', mRNA sequence.

modified polylinker; Site_1: EcoR I; Site_2: Not I;
NCI GGAP FTI is a normalized cDNA library constructed from a pool of 81 RNA samples from Alveolar Macrophages challenged with different treatments. The library was normalized according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand CDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT773-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is GGCCANGCCG. The tissue was provided by Dr. Gary W. TAG_IIB=UI-H-FTI turnersity of lowa.

with a modified polylinker; Site 1: EcoR I; Site 2: Not I;
NCI CGAP EII is a normalized cDNA library containing the
following tissue(s): Chondrosarcoma. The library was
constructed according to Bonaldo, Lennon and Soarce,
Genome Research, 6:791-806, 1996. First strand cDNA
synthesis was primed with an oligo-dT primer containing a
Not I site. Double stranded cDNA was ligated to an EcoR I
adaptor, digested with Not I, and cloned directionally
into pT7T3-Pac vector. The oligonucleotide used to prime
the synthesis of first-strand cDNA contains a library tag
sequence that is located between the Not I site and the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 TAG_SEQ=ACACTTGCAC"

                                                                                                                                                                                                                                                                                                                                                                                                                                                      Double-stranded cDNA was then digested with BamH1 and XhoI and directionally cloned into the BamH1 and Sall sites of lambda pSB vector. Library went through one round of normalization. Library was constructed by Wei Yu at RIKEN of Japan (Carninci P, Westover A, Nishiyama Y, Ohsumi T, Itoh M, Nagaoka S, SasakiN, Okazaki Y, Muramatsu M, Schneider C, Hayashizaki Y, High efficiency selection of full-length cDNA by improved blotinylated cap trapper., DNA Res 4: 1, 61-6, Feb 28, 1997) "

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                  106.2

Sequence 1, Application US/08910731

Patent No. 593440

GENERAL INFORMATION:
APPLICANT: GHATTERJEE, DEB K.
APPLICANT: SHANDLIYA, HARINI
TITLE OF INVENTION: Mammalian Ribonuclease Inhibitors and Use Thereof MUMBER OF SEQUENCES: 16

CORRESPONDENCE ADDRESS:
ADDRESSEE: STERME, KESSLER, GOLDSTEIN & POX P.L.L.C.
STREET: 1100 NEW YORK AVE., N.W., SUITE 600

CITY: WASHINGTON
STATE: D.C.
COUNTRY: USA
ZIP: 20005-3934

COMPUTER RADABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SUSTEM: PC DOS/MS-DOS
SOFTWARE: PLOPSY disk
COMPUTER: IBM PC compatible
OPERATING SUSTEM: PC DOS/MS-DOS
SOFTWARE: PAPHICATION DATA:
APPLICATION NUMBER: US/08/910,731
FILING DATE: (Herewith)
CLASSIFICATION DATA:
APPLICATION NUMBER: 08/794,546
FILING DATE: 04-PBB-1997
PRICE APPLICATION NUMBER: 08/794,546
FILING DATE: 16-AUG-196

PROPARENCE DORGET INFORMATION:
NAME: ESMOND, ROBERT W.
REGISTRATION NUMBER: 32.993
REFERENCE/DOCKET ```
